

Duboisia, Kingaroy, Australia

Situated in the Kingaroy region, this corporate medicinal herb grower was seeking a way to address declining alkaloid yields, rising tree death and the significant influence of diseases and pests while saving money.

In the last three years, we have recycled our crop residues through Groundswell® to make our own HumiSoil®... we applied HumiSoil®, XLR8® Bio and Bio-Defender®... the results we received in the first year were fantastic.

Nino Atanasov, Senior Agronomist

SOLUTION

Application of HumiSoil® made from organic residues available on site combined with sources available locally using the Groundswell® process, XLR8® Bio made from Bio-Regen® process using excess fruit harvest, and Bio-Defender®.
